

# FM/LM Series Up/Down/Up-Down Measure Counter

DIN W72×H72, W144×H72mm of Up / Down / Up-Down measure counter

## ■ Features

- Selectable Multi / Divide function
- Upgrade counting speed : 1cps, 5kcps
- Selectable voltage input(PNP) or no-voltage input(NPN): Memory protection for 10 years (Using non-voltage semiconductor)
- Decimal point setting(Fixed decimal point of display)
- Wide range of power supply : 100-240VAC 50/60Hz 12-24VAC/DC(Option)
- Built-in Microprocessor

⚠ Please read "Caution for your safety" in operation manual before using.

# FM/LM Series

## ■ Description of inner DIP switches

### ● FM Series

※Please be sure to turn OFF the power before changing input logic.

### ● LM Series

Input logic is changeable by input logic selection switch located at the terminal block.

- No voltage input(NPN)
  - Voltage input(PNP)
- (NPN) F  S (PNP)      (NPN) F  S (PNP)

## ■ Input & output connections

### ○ In case of operating the load by power supply of the sensor

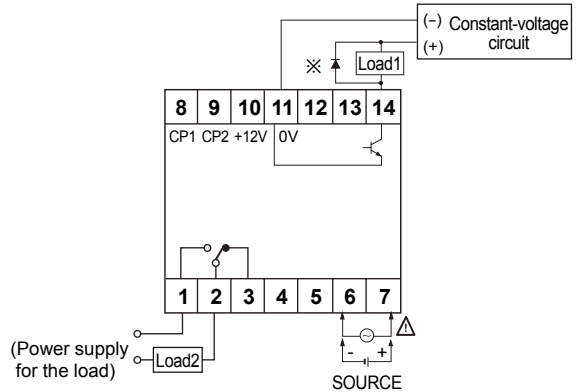

- Please select proper capacity of load, because total value of load capacity and current consumption should not be exceed current capacity(Max. 50mA).

### ○ How to count by external power supply

This unit start to count when "High" level(5-30VDC) is applied at CP1 or CP2 after selecting PNP. ("Low level" : 0-2VDC)

### ○ In case of operating the load by external power supply

- The capacity of the load must not be exceed Max. 30VDC, Max. 100mA of the switching capacity of the transistor.
- Please do not supply the reverse polarity voltage.
- ※In case of using the inductive load(Relay, etc.), please connector the surge absorber(Diode)at both terminals of the load, in case of using the inductive load.

### ○ Using 2 counters with one sensor

- Please connect as the power of sensor is supplied from only one of counters and design input logic with same way.

## ■ Measure Counter

Measure counter sets multiply or divide integer per 1 pulse input.

SW2	Function
4 ON <input type="checkbox"/>	Multi
4 OFF <input type="checkbox"/>	

### ● Multi Mode

It multiplies the inner SW3 setting value at a count input signal and displays it.

Input signal(N) × SW3 preset value = Indication value

∴ N × 4 = 4, 8, 12 ... (N=1, 2, 3 ...)

SW2	Function
4 ON <input type="checkbox"/>	Divide
4 OFF <input type="checkbox"/>	

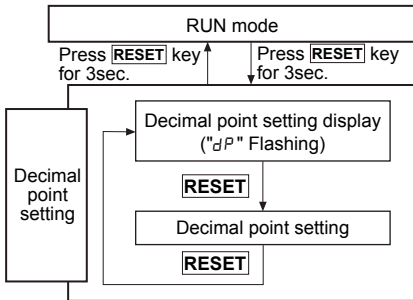

### ● Divide Mode

It displays as 1 when the count input signal is entered as preset value of inner SW3.

(Note) Please be cautious the error can be occurred when down count is executed during up count.

## ■ Setting function of Decimal point

※It advances to "Decimal point setting mode" if press RESET key for 3sec.

※It returns to RUN mode by press RESET key for 3sec in "Decimal point setting mode".

※It returns to RUN mode if no RESET button or digital switch (Dual-setting digital switch for dual preset type) is applied for 60sec. in the "Decimal point setting mode".

※The decimal point setting is not existed in indicator.

### ● Decimal point setting

• The decimal point setting of 6digits indicator

• The decimal point setting of 4digits indicator

※When it enters to the "Decimal point of setting mode, the prior decimal setting status is displayed.

※In the decimal point setting mode, when pressing one of the Up (+) button of digital switch (Dual-setting digital switch for dual preset type), the point is moved to left direction and it is moved to right direction when one of Down (-) button of digital switch (Dual-setting digital switch for dual preset type).

## ■ Counting operation of indication type

# Up/Down/Up-Down Measure Counter

## ■ Proper usage

### ○ Reset function

#### ● Reset

In case of changing the input mode after supplying the power, please take an external reset or manual reset. **If reset is not executed, the counter will be working as previous mode.**

#### ● Reset signal width

It is reset perfectly when the reset signal is applied during **min. 20ms** regardless of the contact input & solid-state input.

※1: In case of a contact reset, it is reset perfectly if the ON time of reset signal is applied during min. 20ms even though a chattering is occurred.

※2: It can be input the signal of CP1 & CP2 after min. 50ms from closing time of reset signal.

### ○ Min. signal width

※1: Please make duty ratio(ON/OFF) 1:1.

※2: Min. signal width

- 1cps : Min. 500ms
- 30cps : Min. 16.7ms
- 2kcps : Min. 0.25ms
- 5kcps : Min. 0.1ms

### ○ Max. counting speed

This is a response speed per 1 sec. when the duty ratio(ON:OFF) of input signal is 1:1. If the duty ratio is not 1:1, the width between ON and OFF should be over min. signal width and the response speed is getting slower against input signal. If either ON or OFF signal is shorter than minimum signal width, this product may not respond.

$T_a$ (ON width) and  $T_b$ (OFF width) need to be over min. signal width.

Max. counting speed is 1/2 value of rated spec. when duty ratio is 1:3. It can not respond if it is smaller than min. signal width( $T_a$ ).

### ○ Error display

Error signal	Error description	Returning method
Err	The state that second preset is 0	Change the setting value to non zero status

※When Error is displayed, the output continues OFF state.  
 ※1st output maintains OFF status by set 1st setting value as 0.  
 ※There is no Error function in indicator.

### ○ Detach the case from body

Cut OFF the power to the counter before detaching the case.

#### ● FM Series

Unscrew the front bolt, and pull the body forward.

#### ● LM Series

Unscrew the rear bolt, and pull the body forward.

### ○ Power

● The inner circuit voltage starts to rise up for the first 100ms after power on, the input may not work at this time. And also the inner circuit voltage drops down for the last 500ms after power off, the input may not work at this time.

● Please use the power within rated power and apply or cut the power at once to prevent from chattering.

### ○ Input signal line

● Shorten the cable distance between the sensor and this product.  
 ● Please use shield wire for input signal needed to be long.  
 ● Please wire input signal line separated from power line.

### ○ Test circuit dielectric, impulse voltage and measure insulated resistor by installing in control panel

● Separate the unit from control box circuit.  
 ● Short-circuit all terminals in terminal block.

### ○ Do not use this unit at below places.

● Place where there are severe vibration or impact.  
 ● Place where strong alkalis or acids are used.  
 ● Place where there are direct rays of the sun  
 ● Place where strong magnetic field or electric noise are generated.

### ○ Installation environment

● It shall be used indoor  
 ● Altitude Max. 2000m  
 ● Pollution Degree 2  
 ● Installation Category II
