Output operation mode

λ contact will be ON as soon as power is supplied, λ contact will be OFF when T1 setting time is up then Δ contact will be ON after T2 switching time is up. Δ contact will be OFF when cut off the power at the status of Δ contact is ON.

Proper usage

- Please supply power quickly at once with using switch or relay contact. Otherwise it may cause time error or power reset failure.
- When supply the power to the timer, connection shown in (Fig. 1) might cause malfunction due to leakage current through R and C. Please connect R and C as shown in (Fig.2) to prevent malfunction.

- Change the setting time (T1), time range or λ-Δ switching time(T2). Otherwise, it might cause malfunction if changing the setting time (T1), time range or λ-Δ switching time(T2) during operation.

- When performing dielectric voltage test or insulation resistance test while the unit is installed on control panel,
- Please isolate this unit from the circuit of control panel.
- Please make all terminals of this unit short- circuited.
